Websites

Future Digital & Print

OVERALL ISSUES

- Inconsistent styling, stroke weight, spacing, size
- Too detailed to be used at small sizes
- Breaks usage & labeling standards
- No selected state
- No usage or creation documentation
- Gaps in library

QUESTIONS & FEEDBACK?

Any challenges from the stakeholders
that weren't mentioned?

WHY NEW ICONOGRAPHY?

WHY NEW ICONOGRAPHY?

Value

- Supports "Compassionate Expertise"
- Update and modernize the brand
- Address gaps across NH apps
- Improve messaging and trust
- Professional & consistent design
- Remediates any license issue risks

Fix Current Issues

- Inconsistency
- Readability
- Recognition
- Ecosystem gaps
- Scalability

Documentation

- Address missing documentation issues
- New documentation around ideology, creation, usage, deployment

QUESTIONS & FEEDBACK?

Any goals or issues to fix that we may have missed?

What can be done to the iconography to add value to our stakeholders?

IDEATION

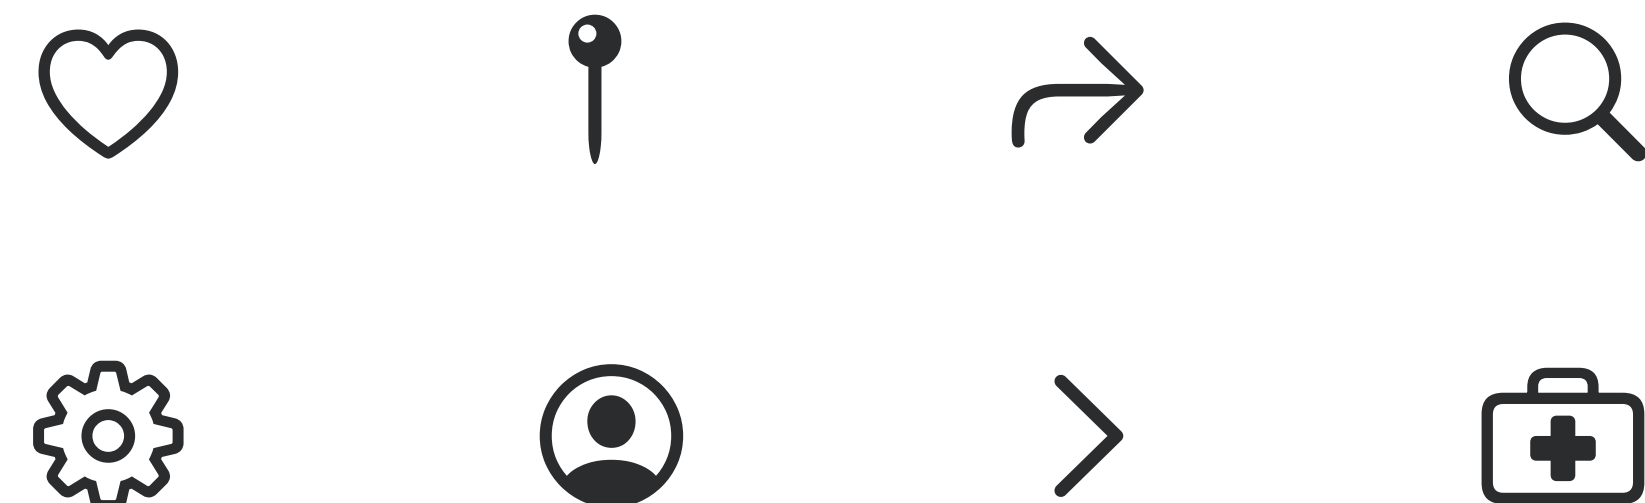

ICON LIBRARIES - GOOGLE / APPLE

GOOGLE

- 3,000 icons, 24px base grid
- Less strict about about stroke rules
- Less definition compared to a 32px grid
- Less strict about white space

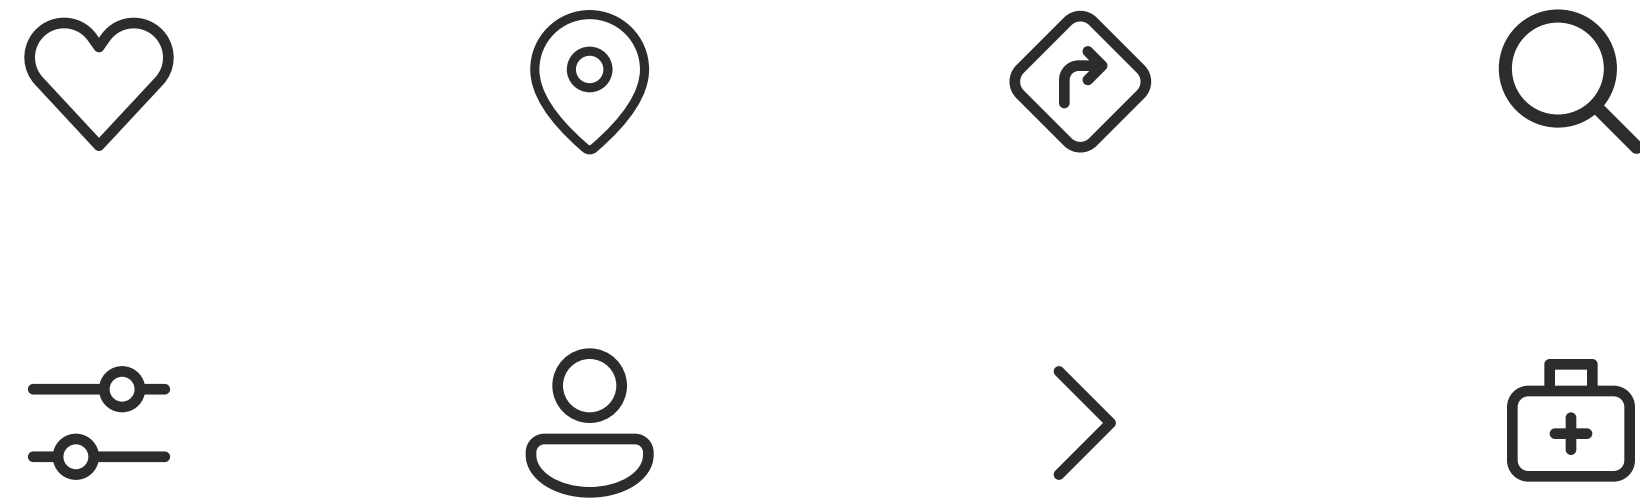

APPLE

- 4500 icons, many grid sizes
- Loose guidelines for stroke weight
- Loose guidelines to choose stroke or filled icons
- Variable weights and sizes available to match fontography

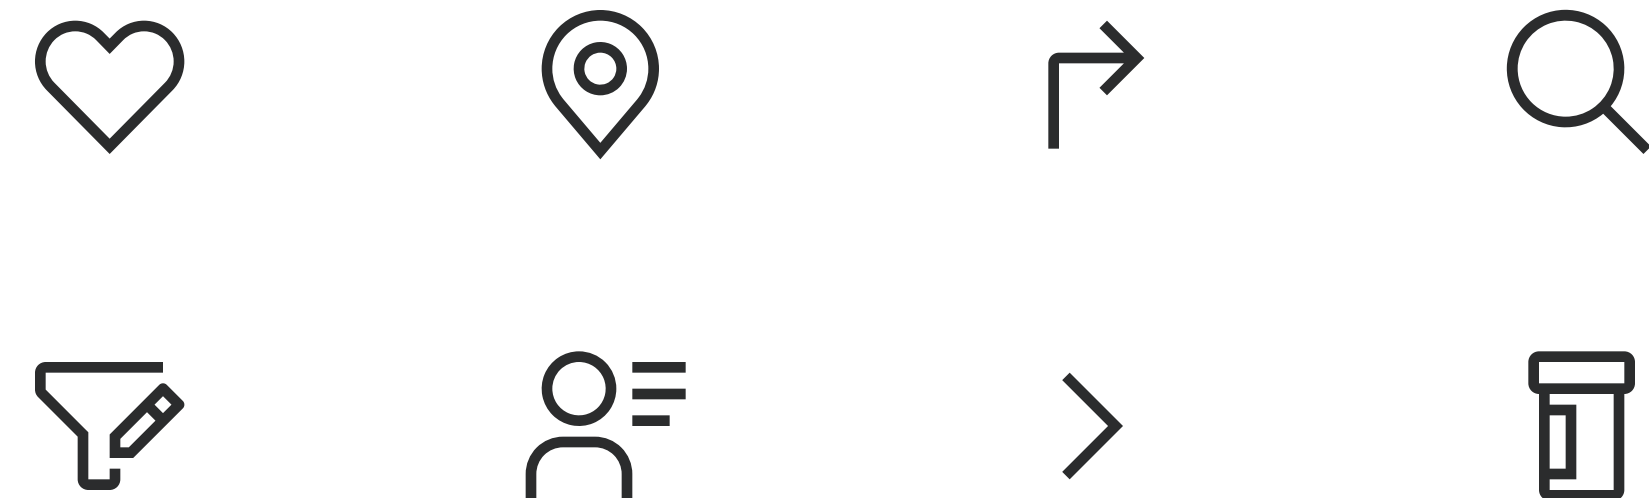

ICON LIBRARIES - MICROSOFT / IBM

MICROSOFT

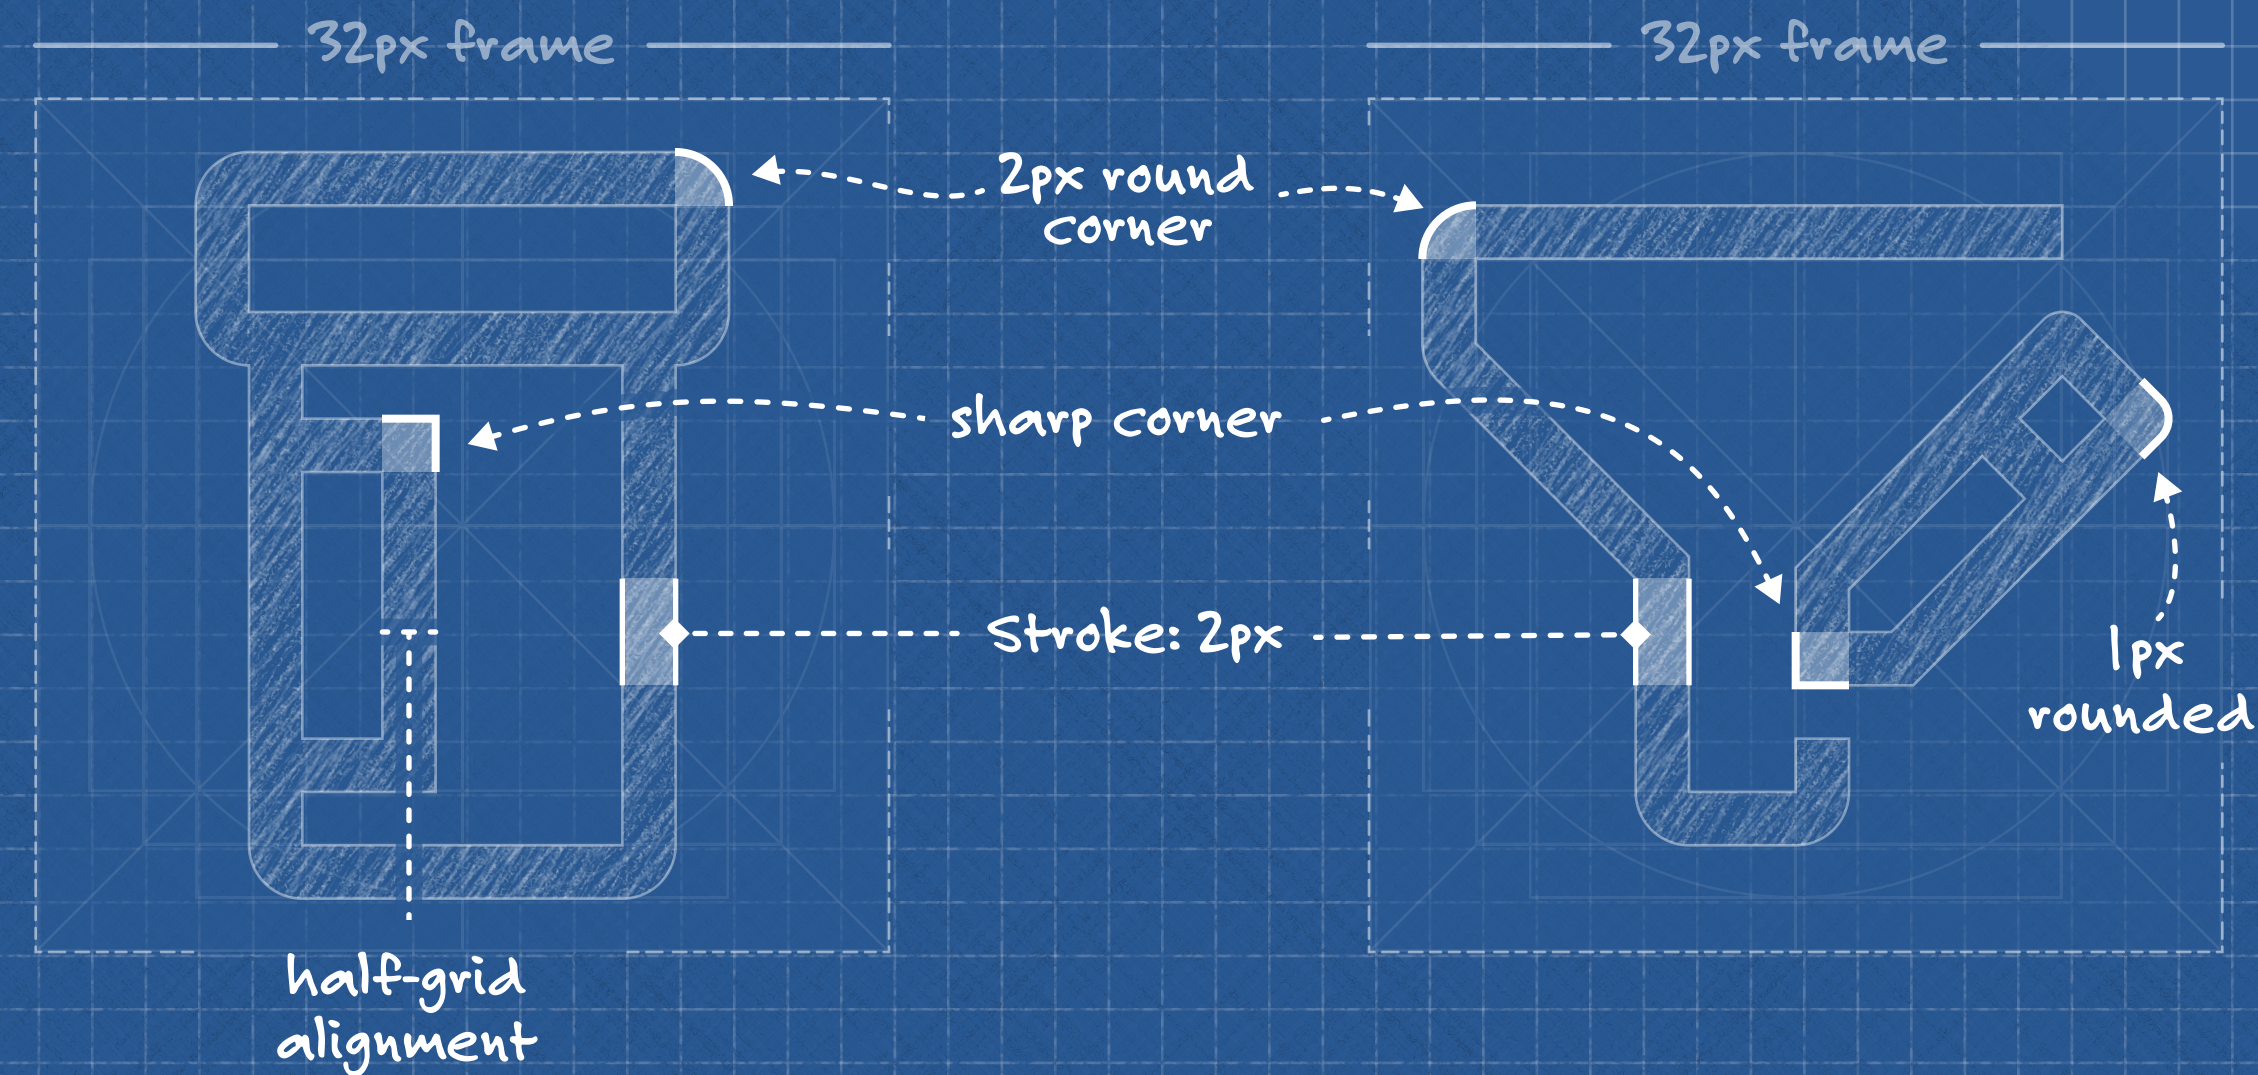

- 2,200 icons, 7 grid sizes from 12px - 48px
- Strict stroke weight based on grid size creates inconsistency in optical appearance and is more design intensive
- Loose stroke and spacing guidelines
- Primarily uses rounded corners and caps

IBM

- +2,000 icons, 32px grid size
- 2px stroke scales well from 16px - 48px
- Flexible but structured design guidelines for consistency and optimal readability
- Higher definition than 24px based grids

IBM INFLUENCED STYLE

Features

- Flexibility of sharp or rounded corners to imply original shape and improve recognition
- Stroke and whitespace rules for improved readability and consistency
- Well-defined grid rules for sharpness and creation process
- Minimalist metaphorical design with essential details

Matching Novant Health Goals

- Quality and clarity of recognition supports “compassionate expertise”
- Improve messaging, trust, and user experience
- Cohensive brand experience

QUESTIONS & FEEDBACK?

Thoughts on our this direction or other
comments/concerns?

BUILDING A FOUNDATION

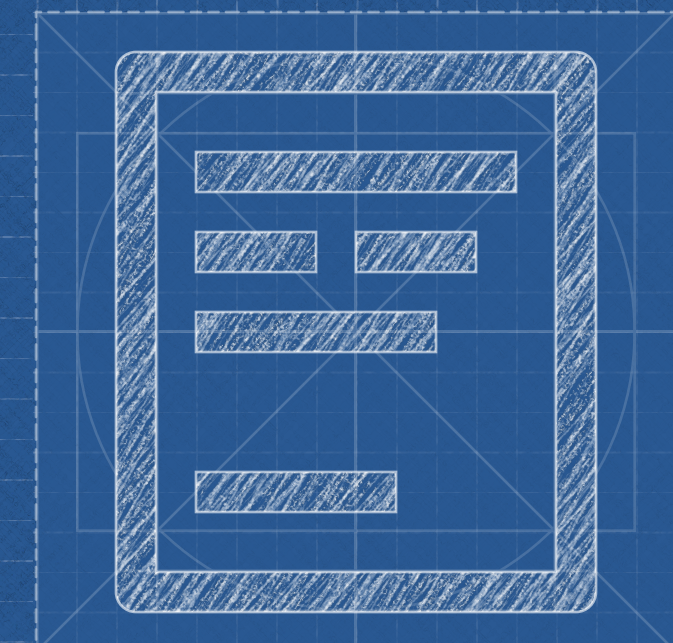

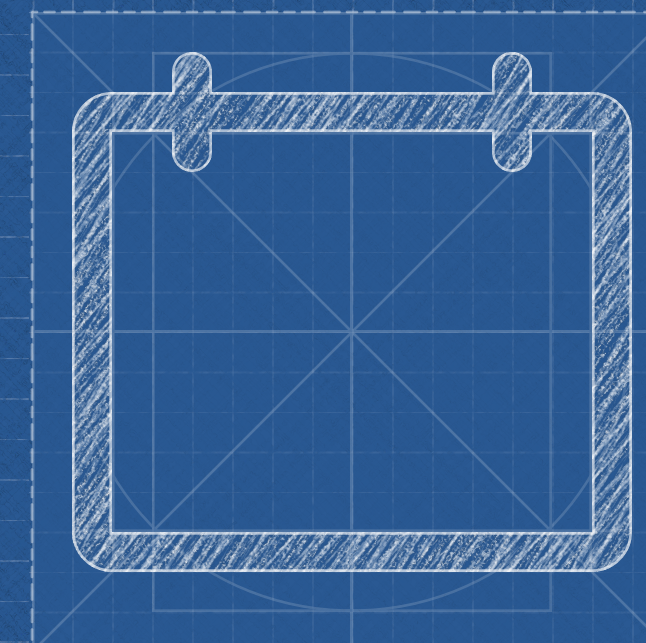

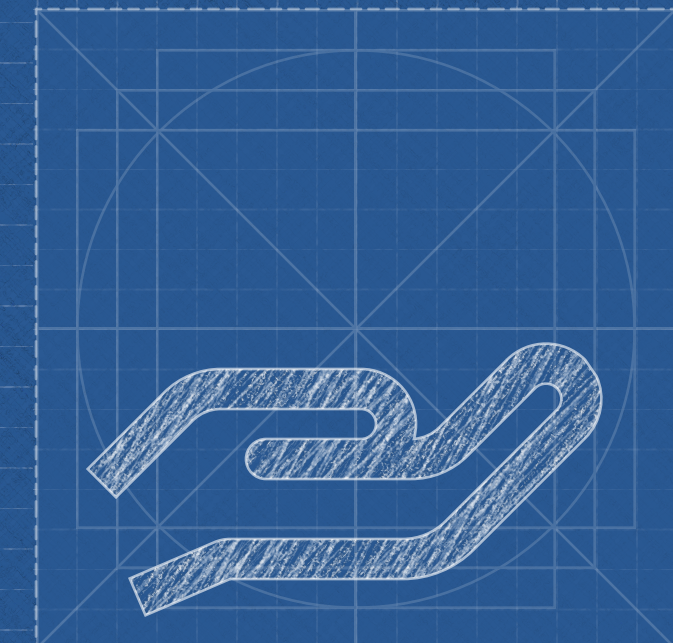

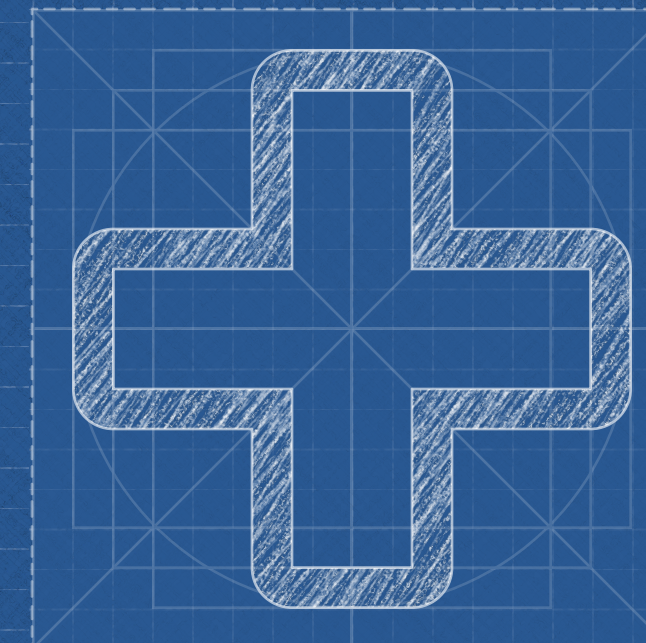

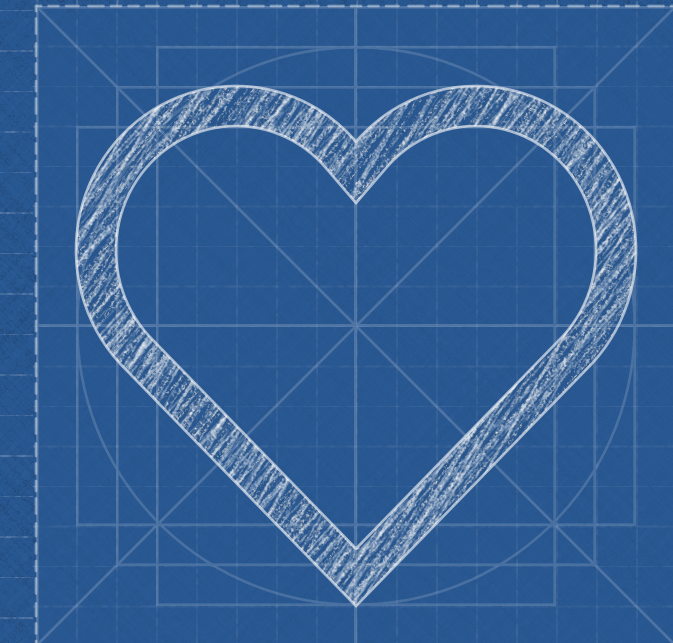

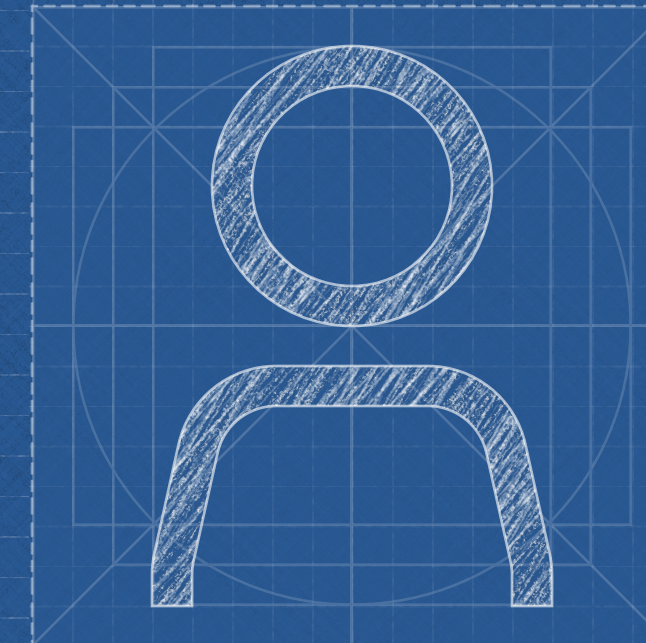

CORE ELEMENTS

Common or unique elements that make up the **core** design of the icon.

Common means you may see this icon more than once because it's applicable for a variety of situations, such as an icon of a person.

Unique elements would only appear 1-2 times in the library because of a specific meaning or usage.

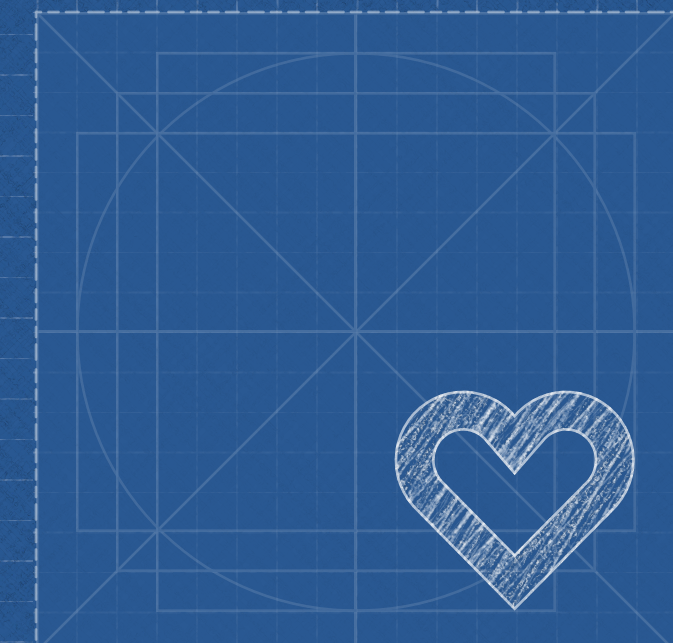

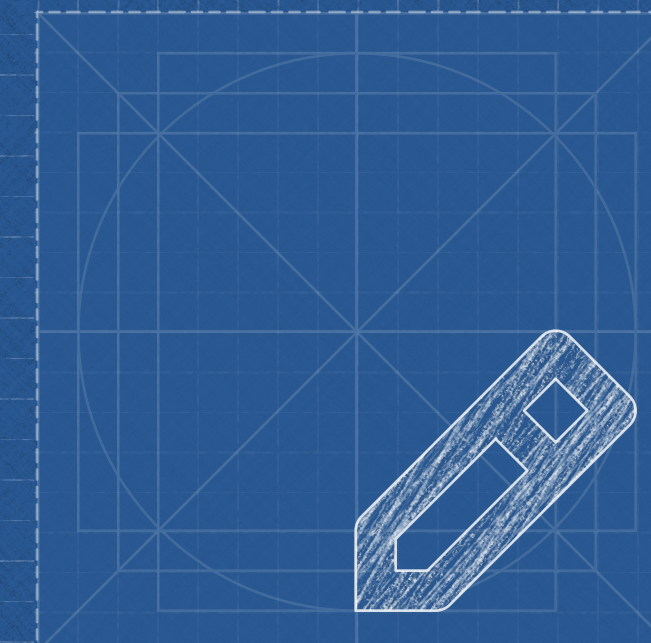

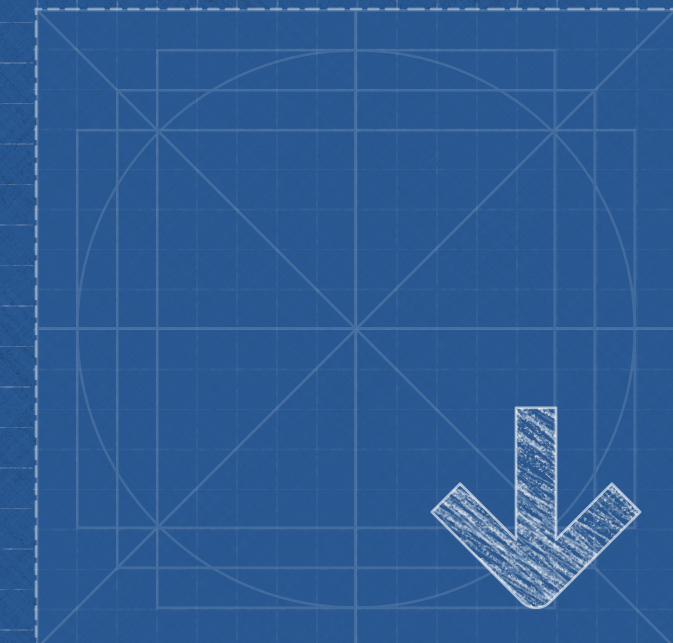

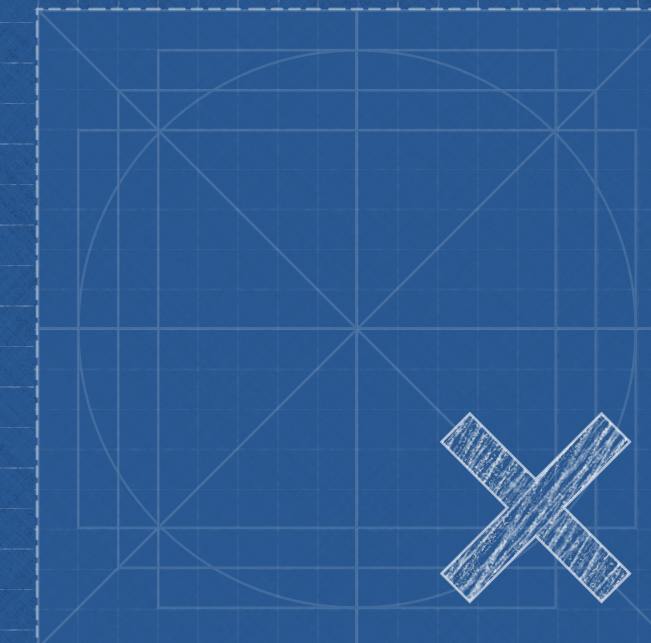

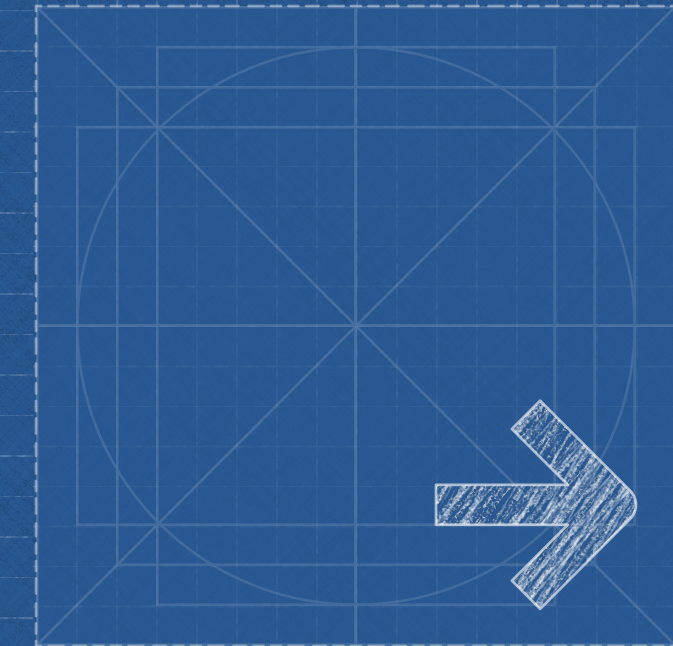

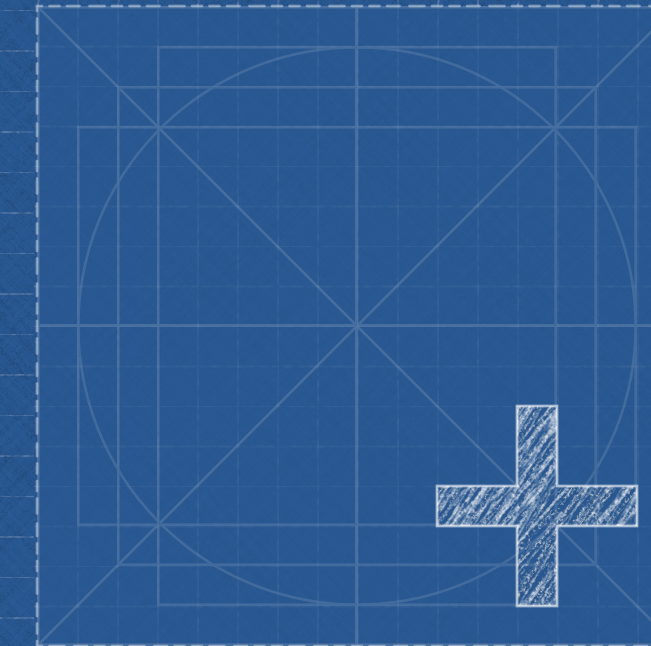

Core elements may or may not include **modifiers** or may be paired with one or more common elements to make a new icon.

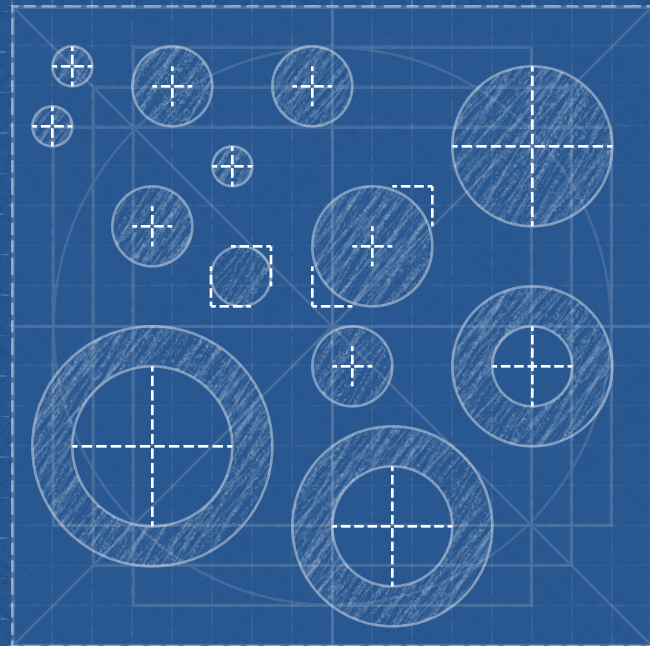

MODIFIERS

Indicates a changed state or modifies the intended meaning, denoting actions or context such as:

- create
- refer / forward
- delete / cancel
- download
- edit
- save

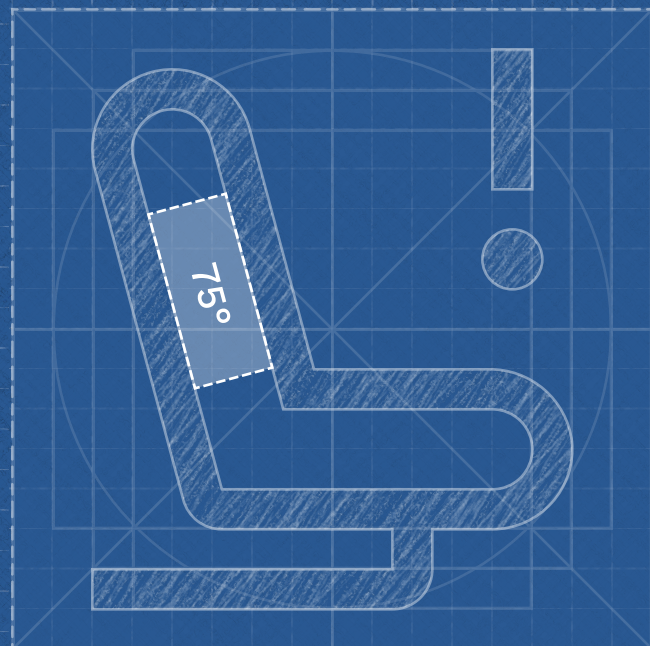

A SAMPLE OF RULES

Centering and Alignment

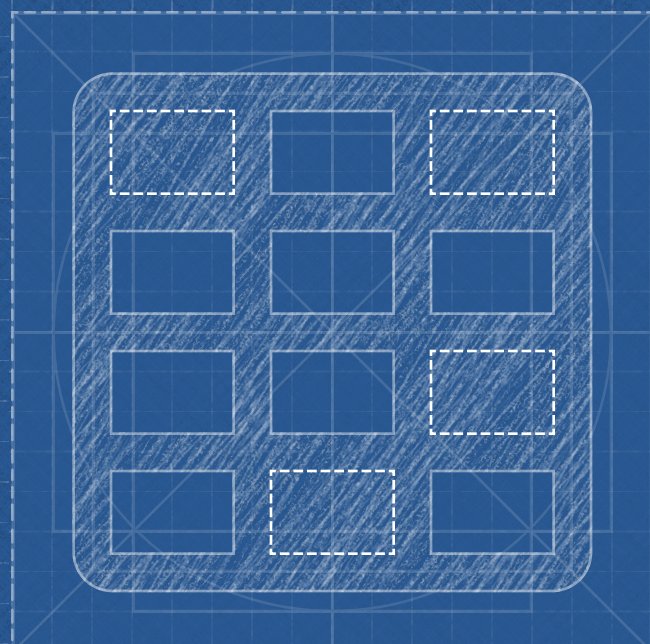

Align the center of items and their bounds to the grid or half-grid.

Create items using block or half-block dimensions.

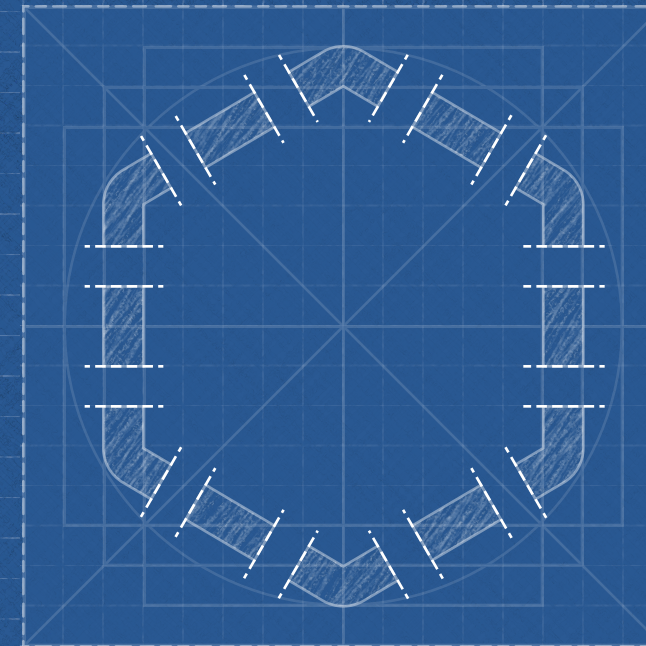

Increments of 15° or Snap to Grid

Create angles so their nodes are on grid or snap to 15° angles.

Solids and Strokes

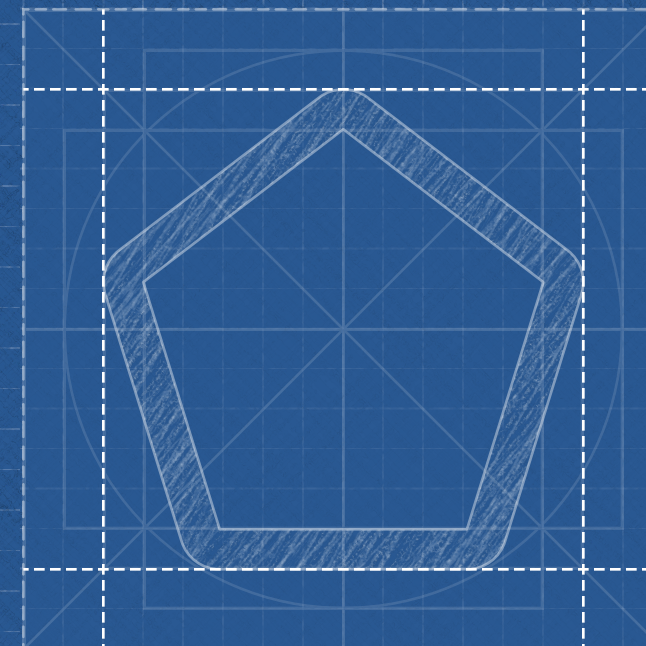

Strokes are the primary aspect of this style but using solid areas to ensure recognition is acceptable.

Symmetry is Favored

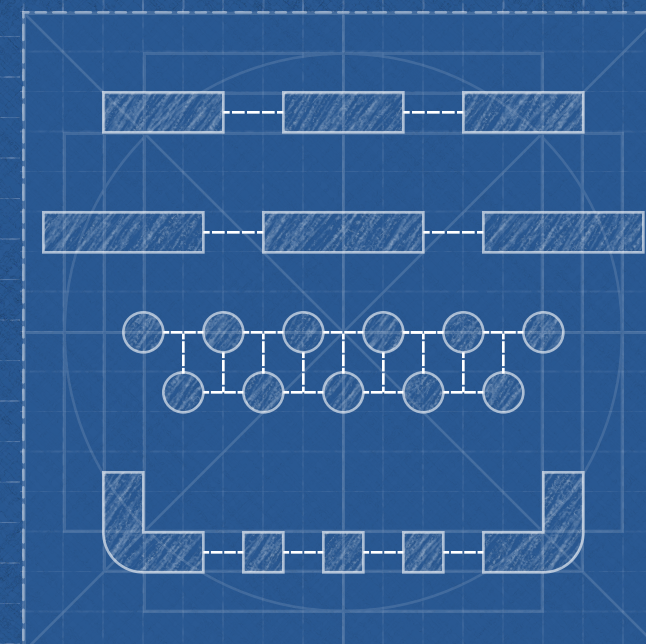

Design for symmetry along at least one axis when possible.

Use asymmetry when appropriate.

Corner Alignment

Oddly angled corners must still land on grid whenever possible - art may require slight alterations to remain true to this rule.

Dashes and Dots

Separate dashes and dots by a minimum of 1 block on the grid. Maintain an even pattern whenever possible.

DESIGN, DOCUMENT, DELIVER

Design Ideation

Capturing the metaphor of an icon and turning that into possible representations takes iteration.

User Testing

Validating possible icons through user testing in and out of context ensures the best variation will be added to the Aurora Library.

Document & Deliver

Once an Icon is chosen, it is documented online and added to design and development platforms for delivery.

QUESTIONS & FEEDBACK?

Thoughts around this design process
and strategy we're taking to build the
foundation of the iconography library?
